

Collect Point Self **AWB** Integration

METHOD 1

Export the list of available pick-up points

- `export_locatii_collect_point_integrat.php`

Parameters:

- username
- user_pass
- client_id
- number (number of pick-up points that will be returned)
- radius (radius in km, referring to the no of km in which the pick-up points will be returned) - (area/distance in raza in km, wich will be returned pick-up points)
- address (address in the following format: city, street, number, zip code)

Address example: **Bucharest, Iuliu Maniu, 2, 061102**

A CVS file will be returned, file that will contain the pick-up points and their details.

For generating AWBs, the following script `import_awb_integrat.php` will be used, the script has the following details:

- service: **CollectPoint** (when there is no cash on delivery) or **CollectPoint Collector Account** (when there is cash on delivery)
- the information from the necessary columns will be used for county, town, street and zip code
- options: **F**

Flow example:

1. calling `tarif.php` (optional)
2. calling `export_locatii_collect_point_integrat.php`
3. calling `import_awb_integrat.php`

*transmitting all the parameters is mandatory

METHOD 2

a. Encoding parameters:

-encode_integrat.php

Parameters:

- username
- user_pass
- client_id
- type (will be filled in with “collect”)
- plic (1 or 0)
- colet (1 or 0)
- greutate (max. 10kg)
- ramburs (max. 500 lei)
- valoare_declarata (max. 500 lei)
- plata_la at (expeditor (sender) or destinatar (recipient))
- judet
- localitate
- adresa (street, number, zip code)
- nume
- telefon
- email

If there are no errors on parameters, a string with the following form will be returned:

1,abcdef878787 (1 = success, the encoded string that will be transmitted on step b)
*transmitting all the data is mandatory

b. Transmitting encoded string for displaying the page with pick-up points selection:

[https://www.selfawb.ro/login_modul_client.php?id= abcdef878787](https://www.selfawb.ro/login_modul_client.php?id=abcdef878787)

The above mentioned link will be displayed in the website checkout area, and when accessing it, the user will be redirected to the pick-up point selection page implemented by FAN Courier. The preferred location can be selected on this page.

After selecting the preferred pick-up point by the user and pressing “Continue order”, the details are saved in the FAN Courier system in order to be accessed and so the AWB can be generated.

c. AWB generating:

-export_awb_collect_point_integrat.php

Parameters:

- username
- user_pass
- client_id
- data (format dd.mm.yyyy)

A CVS file will be generated with the following data:

- link that will generate AWB corresponding to an order with CollectPoint deliver method
(http://www.selfawb.ro/order.php?order_id=4cf82fac223b20cfb7b4f5c18&type=collect)
- recipient's details

Flow example:

1. calling **encode_integrat.php**
2. displaying link from "b" bullet in the checkout area in order to be accessed by the customer
3. calling **export_awb_collect_point_integrat.php** for exporting CVS with CollectPoint deliveries from one day and accessing the links for generating AWBs

Details:

Using the CollectPoint services implies a series of details:

- maximum weight: 10 kg
- maximum value for cash on delivery and declared value: 500 lei
- 1 envelope or 1 parcel can be sent per expedition
- recipient's phone number: valid format, without prefixes (07xx xxx xxx)
- recipient's email is mandatory
