Module specifications

The FAN Courier shipping module:

- was developed for cash payment and does not allow card payment + PO;
- does not accept the use of vouchers and discount codes;
- the name of the service cannot be renamed from the checkout page;
- was not developed for international dispatches;
- was developed for standard theme and checkout page with separate steps.

If you wish to customize your website we can offer you the SelfAWB integration API. For more details, please send us a request at asistenta.it@fancourier.ro .

Module observations

- It is necessary to use the list of localities and counties from the FAN Courier system. You can download the list from the SelfAWB application → Useful section → List with the correct names of the localities.
- In case you do not have a contract signed with FAN Courier, the PayPoint Collect Point and eBOX services are not available.
- The Check on Delivery and ePOD options are unavailable for now, for this version of the module.

Instructions of installing and configuring the FAN Courier module

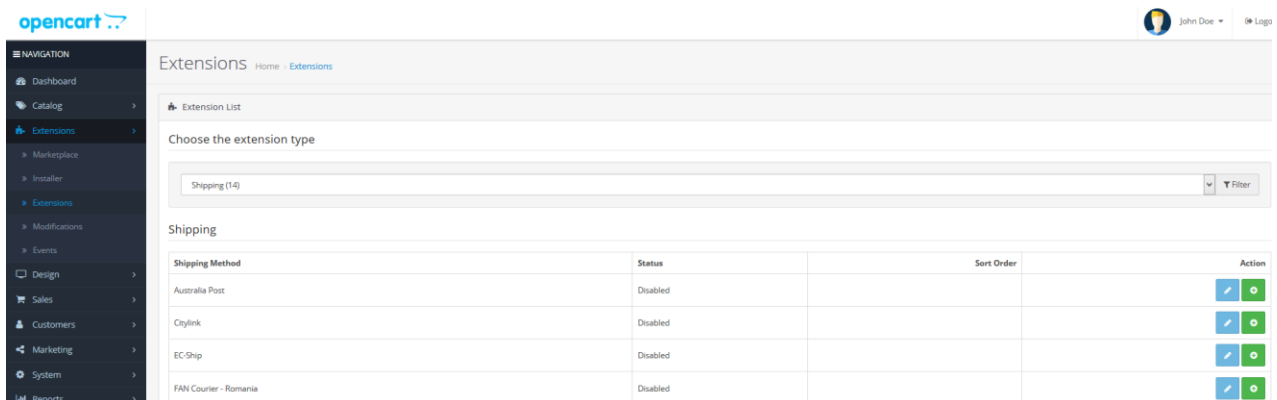

The shipping module FAN Courier can be downloaded from <https://www.fancourier.ro/e-commerce/>.

To install the FAN Courier module, the following are necessary:

- The downloaded archive is unzipped.
- The files are copied from the unzipped folder **structure of the platform OpenCart from the server where it is installed**. Ex. According to the structure from the archive the file fancourier.twig must be copied in...\\opencart\\admin\\view\\template\\extension\\shipping

ATTENTION

If the installation of another version of the module is desired, first the current installed module from the admin platform will be uninstalled: Extensions -> Extensions-> Shipping -> click option Uninstall appropriate to the FAN Courier- Romania module. After uninstall, the normal installing procedure is followed.

The screenshot shows the OpenCart admin interface. On the left is a sidebar with navigation options: Dashboard, Catalog, Extensions (selected), Marketplace, Installer, Modifications, Events, Design, Sales, Customers, Marketing, System, and Reports. The main content area is titled 'Extensions' and shows a list of shipping methods. The 'Shipping' section is active, displaying a table of shipping methods. The table has columns for Shipping Method, Status, Sort Order, and Action. The shipping methods listed are Australia Post, Croylink, EC-Ship, and FAN Courier - Romania, all of which are currently disabled. The FAN Courier - Romania module is highlighted in blue.

Shipping Method	Status	Sort Order	Action
Australia Post	Disabled		Edit Uninstall
Croylink	Disabled		Edit Uninstall
EC-Ship	Disabled		Edit Uninstall
FAN Courier - Romania	Disabled		Edit Uninstall

To install the module it is necessary to access Admin -> Extensions -> Extensions -> Shipping is selected -> FAN Courier – Romania and **Install** is pressed.

FAN Courier module configuration

To configure the module it is necessary to access Admin -> Extensions -> Extensions -> Shipping is selected-> FAN Courier – Romania and **Edit** is pressed.

Module settings

1. **To use the FAN Courier module** – select Enabled to activate the module;
2. **Client ID** – you can obtain it from the left side of SelfAWB after logging in the application;
3. **User account** – the user account used for log in the SelfAWB application;
4. **Password** –password used for logging in the SelfAWB application;
5. **AWB confirmation by the Admin** – select Yes if you want to confirm the transport document for each order only from the administrator console. This way you avoid the filling of the register in SelfAWB with AWBs that will not be used. The dispatches are taken over by FAN Courier only if they are picked up by the courier;
6. **Dispatch of parcels** – select Yes if you dispatch parcels and No if you dispatch envelopes;
7. **Number of packages / AWB** – introduce 1 if you send 1 package/AWB or the total number of packages dispatched with a single AWB number;
8. **AWB payment at destination** – select Yes if the payment of the dispatch will be made at destination (the displayed tariff will be the one from the list and not the one negotiated according to the contract);
9. **Price display without VAT** – select Yes to display the transport tax without VAT;
10. **Price display only additional km** – Yes will be set (it is necessary to set: AWB payment at destination – No and Addition of transport tax at reimbursement – yes) to display the transport tariff only for destinations with additional km (the tax will be added at reimbursement, the AWB payment will be sender);
11. **Hiding the transport tax** – select Yes to hide the cost of the dispatch and always display 0.00 (lei/euro/dollars);
12. **Minimum value for free transport** – introduce a positive numerical value to display the transport tax 0 LEI if the value of the costs of ordered products is at least equal to the introduced value;
13. **Fixed value for transport in Bucharest** – introduce a positive numerical value to be displayed as fixed transport tax in Bucharest instead of the tax calculated automatically;
14. **Fixed value for transport in the country** - introduce a positive numerical value to be displayed as fixed transport tax in Bucharest instead of the tax calculated automatically;
15. **Request reimbursement for value of goods**– select Yes to request reimbursement of total value of the products included in the order;

- 
16. **Addition of transport tax at reimbursement** – select Yes to include the reimbursement value (printed on the AWB at reimbursement) and the value of the transport (it is necessary to set: AWB payment at destination – No; the applied tariff will be the one negotiated in the contract);
 17. **Reimbursement request in bank account** – select Yes to request reimbursement in bank account and generate only Collector Account type of dispatches;
 18. **Reimbursement payment at destination** – select Yes for the payment of the reimbursement dispatch at destination (only for dispatches non - Collector Account for which reimbursement is requested);
 19. **Request transport insurance** – select Yes to insure the dispatches in case of damages according to the delivery terms and conditions. The declared value will be equal to the total value + taxes (ex: VAT) of the products included in the order;
 20. **Include products code at content** – select Yes for printing at Content on AWB the codes of products included in the order;
 21. **Observations (printing on AWB)** – introduce the message that you wish to print on the AWB at Observations box;
 22. **Contact person** – introduce the name of sender contact person or any other additional information;
 23. **Display of Red Code option** – select Yes to display the Red Code service types where they are available;
 24. **Display of Express Loco option** – select Yes to display the Express Loco service types for dispatches with pick-up and delivery in Bucharest;
 25. **Display of delivery option in fixed point (PayPoint Collect Point)** – select Yes to display the delivery service type in PayPoint location.
 26. **Display of delivery option in fixed point (eBOX)** – select Yes to display the delivery service type in eBOX locker.
 27. **Check on Delivery** – it is ticked if the Check on Delivery service is chosen (this service is accessible and taxable only at sender – the configuration: AWB payment at destination – No, will be necessary).
 28. **ePOD option use** – it is ticked only if the ePOD service is chosen for printing the AWBs in A6.

Communication with SelfAWB- Ecommerce application

All the orders that the customers try to generate on the website, after filling in the delivery and invoicing data in the checkout page are found in the SelfAWB application.

After generating the order from the website, it is necessary to access www.selfawb.ro, the eCommerce section for the generation of the AWB.

The eCommerce menu from the SelfAWB has the following functionalities:

- Displaying all orders generated from ecommerce platforms that use the FAN Courier shipping module (processed orders* and non-processed orders**).
- For an order, the following will be displayed: receiver, phone number, address.
- When “+” is pressed the following will be displayed: crt. no. (affident to each order_id), service (appropriate for every order_id), envelopes, parcels, weight, content, observations, reimbursement and a series of actions.
- The actions that will be made upon an order are: History of Changes, Change, Delete and AWB Generation
 - Processed orders* - for which an AWB was generated
 - Non-processed orders** - orders without AWB number

So, when an order is placed from a shipping module and the user will click a certain service (ex. Collector Account), he will be redirected towards the login page from SELFAWB, then towards the eCommerce menu and the order will be framed in a red border.

The orders completed on your website can be seen from the Magento platform -> Admin -> Sales -> Orders.

FAN Courier Support

For questions or uncertainties, please contact us at asistenta.it@fancourier.ro. It is necessary to communicate your website, platform version and send us print-screens with the module settings.
